Make sure you have a license key that you can use to create your DXF file. Use the Autodesk Autocad keygen to generate your DXF file. Install the program. Paste your DXF file generated by the Autodesk Autocad keygen and save the file as DXF file. Launch the application and then import the DXF file. Select the objects you want to remove from the DXF file. Click the 'Erase' button. Your design will be erased from the DXF file. The application has two modes of operation: 'Edit' mode and 'Remove' mode. 'Edit' mode allows the user to select and manipulate the objects, before saving the file. 'Remove' mode erases the objects from the DXF file. The 'Erase' operation is a destructive one. After the operation is finished, the 'Edit' mode has disappeared, and the user can no longer see the objects. Do not erase any object that is needed to recreate the object later. You can have multiple DXF files. To open the DXF file with 'Remove' mode, simply select the DXF file and the 'Remove' mode will be activated. If there is no 'Remove' mode, the file will not be erased, and only the 'Edit' mode will be activated.
