
IIS Log Viewer Crack Download [32|64bit] 2022 [New]

IIS Log Viewer License Keygen For PC

IIS Log Viewer is a professional IIS log file viewer. It allows you to view IIS log files in realtime without the hassle of having to constantly copy and paste them to an editor. IIS Log Viewer is a very handy tool when troubleshooting issues with IIS. It lets you view logs from multiple IIS sites at once and also lets you save the logs to disk. View IIS logs directly from the command line with IIS Log Viewer. Save and/or send the logs in a variety of ways. ... IIS SMTP Manager is a Mail Server administration tool for the Windows operating systems, which allow you to manage IIS SMTP settings. IIS SMTP Manager is a third-party program from the Download.com download directory and is distributed under the GNU/GPL license. IIS SMTP Manager Version: 3.5.0 Platform: Windows IIS SMTP Manager was installed on 2014-12-05. You can run IIS SMTP Manager as a Windows service, a console application or as a web application. IIS SMTP Manager notes: 2.4 GB of data (65,528 files) About 1.4 minutes of operation (18.3 days of operation at 25 hours per day) A slow PC can take a long time to install. That's why we recommend installing IIS SMTP Manager on a fast, reliable server, and then copy it to your local PC (instead of the other way around). The copying process takes about 30 minutes. IIS SMTP Manager: Import SMTP settings from any IIS FTP server View SMTP details like IP addresses, Port numbers, Accounts, User ID, Password, and more The IIS Log Viewer allows you to view logs from multiple IIS sites at once. The main purpose of IIS Log Viewer is to help you get IIS logging into a single file so that you can troubleshoot issues more easily. The program gives the impression of realtime monitoring of the server traffic. The program is also very handy when troubleshooting issues with IIS. IIS Log Viewer allows you to view logs from multiple IIS sites at once and also lets you save the logs to disk. The log viewing window shows multiple log files (IIS sites), and allows you to view the content of each log file

IIS Log Viewer Crack Keygen For (LifeTime)

This macro replaces selected hex data in an IIS logfile using a specified key. The macro works by decoding a 16 byte IIS logfile using the specified key and replaces the selected hex data with the decoded data. The Macro is recommended for users with a knowledge of hex editing. WinHttp IIS Log Viewer Activation Code is a free command line tool designed for viewing IIS log files. Makes copies of the current logfile at given intervals which gives the impression of realtime monitoring of the server traffic. KEYMACRO Description: This macro replaces selected hex data in an IIS logfile using a specified key. The macro works by decoding a 16 byte IIS logfile using the specified key and replaces the selected hex data with the decoded data. The Macro is recommended for users with a knowledge of hex editing. Hello, A while ago, I wrote a quick perl script which manipulates the contents of an IIS log file and displays it in a few different ways. I have been using it a lot over the last year for some unusual log analyses. Now that I have finally installed Windows 7 64 bit, I decided to update the script. While I did not remove the old one, I did modify it to make it handle the new versions of IIS better. This is a very basic script, it uses regular expressions to highlight the lines of interest. I am sure there are some more efficient ways to do this, but I am not very familiar with them. Regards, Mike LogParser is a program that searches for certain conditions in a Windows IIS log file and spits them out as a 'plain text' report. I wrote this program back in 2002 for my own use. Over the past few years, it has become a very

useful tool for those of us who work with IIS and logfiles. I have refined the program and made a couple of enhancements to make it a better tool. In the comments section, there are a couple of links to some other tools that will do the same thing. This is a very basic script, it uses regular expressions to highlight the lines of interest. I am sure there are some more efficient ways to do this, but I am not very familiar with them. That is not really an issue, I do it like this just because I know that it works. You could also use `grep` or something similar. Quote You can also add an ASCII character to make 81e310abff

IIS Log Viewer Crack+ Patch With Serial Key

Have you ever wanted to watch your own webserver logs? And did you ever wanted to automate your IIS logfile watching? IIS Log Viewer is a logfile viewer for your IIS webserver. It is the easiest way to watch your IIS logs. It is developed in C# and uses .NET Framework. [+] IIS Log Viewer is a GUI designed for watching IIS log files. It makes copies of the current logfile at given intervals. In this way it gives the impression of realtime monitoring of the server traffic. Open the program. A small form comes up with the window title "Monitor IIS". The left panel is for IIS logfile name. The right panel is for displaying the last week logs. The current week logs are displayed as a preview. You can cancel the preview anytime by clicking the button "Cancel Preview". You can open all log files in the last week by clicking the button "Load Logs". If you use Windows Authentication you have to provide the login credentials first. (You can add your username and password in the program's properties.) The "Refresh" button enables you to refresh the last week logs (latest logs will be saved in the previous week's log folder). If the server restarted during the last week, the last week's logs will be reset. A daily log summary is shown by clicking the button "Summary". The text on the top of the right panel will reflect the number of the days the last week logs has been saved. If there are no new logs available you will see "No Logs Available". To display the current logfile you can open it using the "Open Logfile" button. The logfile can be opened multiple times. You can start a new logfile watching session by clicking the button "New Session". To quit a session you can click the "Quit Session" button. You can use the "Preferences" button to change the IIS Log Viewer main window appearance. The window size can be adjusted by changing the "Window Size". The program supports saving and restoring the last week logs. The "Save" and "Restore" buttons will save the current week logs. The last week logs will be restored when the program starts. The "Logfile name" will be changed to the name of the saved logfile. The "Restore All" button will restore the previous week's logs.
