## AutoCAD Crack

Go to "File" menu, choose "Save As" and enter a name for your new drawing. For example, if your keygen name is "123-3dsdgdgi-map-keygen.exe", you must name it "123-3dsdgdgi-map-keygen.dwt". Click on the "Save as" button. Click on the "Save to" button and select the folder where you have extracted the keygen. You have to find a place where you can store your maps. You have created your own map. To test your map, go to File->"Open". You will see a window with two fields: "File name" and "Load from file". Click on "Load from file" and select "1" in the "Select a map" field. If you don't have any map selected, click "Open" in the "Load map from file" box. Click "Open" and your map will be displayed. If you are not in the right place, change it by clicking on the "Search" button and select your folder in the "Where are you?" box. Your map will appear in the "Map" field. Go to "View" menu, choose "Scale" and set the scale for your map. For example, I use a scale of 50. Go to "Rendering" menu, choose "Clip planes" and "Clip wireframe" and set the values. For example, I chose "Clip plane: 50, Clip wireframe: 100". If you have an error when opening your map, change the scale and set it to the default value of 50. Then, check the clipping planes. That's it. You have now created your own map. To use it, just import your map into AutoCAD. Q: Can't access a variable inside a function outside of that function Can anyone please help me fix this, I've tried every possible way but just can't get it to work. The problem I'm having is that when I run this code the value of the variables that I set in the function is not carried over to the main, it's set to the default values I gave it to that is 0. I've tried declaring the variables outside the function, then I tried putting them in a global class, I also tried putting them in a different function in the main. I

## What's New in the?

Add and edit shapes directly from AutoCAD, similar to how you edit them in other CAD applications. Exported PDF files are now more powerful, with rich editing features. Editable graphic files can be created and shared with users with enhanced versions of the available tools. With Markup Import, AutoCAD supports importing most of the standard changes commonly found on reports, such as annotations, highlights, comments, and notes. The Markup Assist feature allows users to enter commands directly in the drawing, with the AutoCAD application to perform commands. (video: 1:09 min.) AutoCAD includes the ability to label parts of drawings, marking the area of a drawing with a unique identifier that is visible to all users. Multi-user workspaces are more intuitive, and are easier to setup and manage for multi-user environments. Multi-resolution rendering and a new way to view 3D files, are two major enhancements. Hand tools are included in the new release. Check out the AutoCAD 2023 product video Actions and Workspaces: Work comfortably in a single, integrated application that can perform complex tasks. You can create multiple workflows and customize the workspace for specific tasks. Extend and customize your workflows by setting up templates that you can use to create and save your workspaces. Take advantage of the new Trusted Workspace option, which gives users the option to add, modify, or remove workflow actions from the default workspace. (video: 1:11 min.) A new Action menu has been added to the ribbon and you can add new actions to workspaces. Workspaces can be renamed, moved, copied, or deleted, and they can be placed within a window or floated in a tabbed palette. Floating windows can be set to automatically minimize when a task is complete. You can copy and paste the data associated with a workspace into another project or into other applications. With actions, you can set up a variety of customized workflows. The Create option, available from the Actions menu, creates a new, empty workspace with a specific template. You can save and share personalized workflows and edit a saved workspace from any application. Choose from three new themes. Create an Action
